

ABSTRACT

By combining lecithin and oil as the principal ingredients, a highly effective, uniform, widely dispersed, pan release spray product is achieved with the lecithin comprising a de-oiled powdered lecithin. The de-oiled , powdered lecithin is blended with the vegetable oil to form a stable emulsion that exhibits superior pan release properties. Furthermore, the oil and lecithin emulsion of the present invention is easily formulated with a variety of blending agents to make flavorful salad dressings, marinades, and pet flavor enhancing products, as a non-aerosol, finger pump based product or as an aerosol product.
